

3D Printer Rules and Guidelines

Neve Laughery

November 29, 2018

1 Administration

The 3D printing administrator will be chosen each semester by the Edinboro Computer Science executive board. They will be responsible for the following:

- Maintaining the 3D printer
 - Calibrating the machine when needed
 - Ordering filament
 - Researching and solving technical issues related to the machine
- Discussing viability of projects with users
- Managing each user's print quota
- Creating time slots to avoid scheduling conflicts

2 Users

Failure to follow these rules and guidelines will result in TBA

2.1 Eligibility

Users should be members of the Edinboro University Computer Science Club. Members of this club will be given priority scheduling over non-members. Prints requested by non-member Edinboro University students will be approved or declined at the discretion of the administrator. In both cases the user must discuss their project with the administrator before printing.

2.2 Print Quota

Users will be allotted TBA prints per academic year, this will be tracked by the administrator. If a user wishes to exceed this quota they must first get express permission by the administrator.

2.3 Filament Used

Users will weigh their projects, including failed prints, on the scale located next to the printer. Users will pay TBA per gram of filament used to the Edinboro Computer Science Club Treasurer. This amount is slightly more than the cost of the filament to account for wear and tear on the machine.

If a user wants to use their own filament for a print it should be discussed with the administrator first.

The Creality Ender 3 can print the following filaments in 1.75 mm:

- PLA
- TPU
- ABS

2.4 Failed Prints

Users are responsible for their own failed prints. Should a print fail the user can either consult the Troubleshooting document or request help from the administrator. Users must pay for all filament used including failed prints.
